/vg/ Saycode 2015 - Logic Model

Phase

Speaker

Start → say() → Robot/alien hivemind → handle_inherent_channels()

/datum/speech
/datum/signal
RAW HTML!

whisper()

send_speech() ← Regular speech ← radio()

May move to listener

render_speech()

Radio shit

Radios

talk_into() — Station Bounced

Broadcast_Message() [GLOBAL]

Tcomms

"Subspace"

receive_signal() — Tcomms shenanigans → Broadcaster receive_information()

Listener

NOTE: All atoms can be listeners.

Hear() — Misunderstood Language → render_speech()

WORK IN PROGRESS

Yep, it's a fucking mess, but it's better than it was.

Only represents tcomms_rework branch code, does not accurately convey logic in Bleeding-Edge code (until merged).

Yell at N3X15 if you want this updated.
